December 3, 2004

Amendment responsive to Office Action of September 3, 2004

In the Claims:

Please delete the Claims as indicated below:

1. (Currently amended) A portable artificial campfire device, comprising:

a spiral shaped, adjustable burner element including a gas entry port

adapted for attachment to a adjustable gas valve and a surface having a plurality

of orifices of varying density formed therein and dispersed throughout the surface

of the spiral shaped, adjustable burner element; and

an adjustable gas valve coupled to the gas entry port.

2. (Currently amended) The invention of claim 1, wherein the spiral

shaped, adjustable burner element is adapted to provide a flame of variable

height and intensity through said plurality of orifices under the control of said

adjustable gas valve.

3. (Currently amended) The invention of claim 1 wherein the spiral

shaped, adjustable burner element is also easily adaptable for placement into

existing campground facilities including campfire rings.

4. (Currently amended) The invention of claim 1 wherein the adjustable

gas valve is adapted for receiving fuel from a pressurized fuel source and for

controlling the flow of the fuel to the spiral shaped, adjustable burner element.

- 5. (Currently amended) The invention of claim 1 wherein the <u>spiral</u> <u>shaped, adjustable</u> burner element is provided in a circular configuration for the provision of a dense surface area.
- 6. (Currently amended) The invention of claim 2 wherein the <u>spiral</u> <u>shaped, adjustable</u> burner element is also easily adaptable for placement into existing campground facilities including campfire rings.
- 7. (Currently amended) The invention of claim 2 wherein the adjustable gas valve is adapted for receiving fuel from a pressurized fuel source and for controlling the flow of the fuel to the <u>spiral shaped</u>, <u>adjustable</u> burner element.
- 8. (Currently amended) The invention of claim 2 wherein the <u>spiral</u> <u>shaped, adjustable</u> burner element is provided in a circular configuration for the provision of a dense surface area.
- 9. (Currently amended) The invention of claim 3, wherein the <u>spiral</u> <u>shaped</u>, <u>adjustable</u> burner element is adapted to provide a flame of variable height and intensity through said plurality of orifices under the control of said adjustable gas valve.

Amendment responsive to Office Action of September 3, 2004

10. (Currently amended) The invention of claim 3 wherein the adjustable gas valve is adapted for receiving fuel from a pressurized fuel source and for controlling the flow of the fuel to the <u>spiral shaped</u>, <u>adjustable</u> burner element.

11. (Currently amended) The invention of claim 3 wherein the <u>spiral</u> <u>shaped, adjustable</u> burner element is provided in a circular configuration for the provision of a dense surface area.

12. (Currently amended) The invention of claim 4, wherein the <u>spiral</u> <u>shaped</u>, <u>adjustable</u> burner element is adapted to provide a flame of variable height and intensity through said plurality of orifices under the control of said adjustable gas valve.

- 13. (Currently amended) The invention of claim 4 wherein the <u>spiral</u> <u>shaped</u>, <u>adjustable</u> burner element is also easily adaptable for placement into existing campground facilities including campfire rings.
- 14. (Currently amended) The invention of claim 4 wherein the <u>spiral</u> <u>shaped, adjustable</u> burner element is provided in a circular configuration for the provision of a dense surface area.

Amendment responsive to Office Action of September 3, 2004

15. (Currently amended) The invention of claim 5, wherein the <u>spiral</u> <u>shaped, adjustable</u> burner element is adapted to provide a flame of variable height and intensity through said plurality of orifices under the control of said adjustable gas valve.

16. (Currently amended) The invention of claim 5 wherein the <u>spiral</u> <u>shaped, adjustable</u> burner element is also easily adaptable for placement into existing campground facilities including campfire rings.

17. (Currently amended) The invention of claim 5 wherein the adjustable gas valve is adapted for receiving fuel from a pressurized fuel source and for controlling the flow of the fuel to the <u>spiral shaped</u>, <u>adjustable</u> burner element.

18. (Currently amended) A portable artificial campfire device comprising:

a <u>spiral shaped</u>, <u>adjustable</u> burner element further comprised of tubular steel formed in a spiral, said burner element having a gas entry port formed near the outermost perimeter of the spiral, said spiral terminating into a gas seal near its center, and said burner element including a surface area having a plurality of orifices of varying density formed therein and dispersed throughout the burner element; and

an adjustable gas valve coupled to said entry port to control the flow of gas into the burner element.

Amendment responsive to Office Action of September 3, 2004

19. (Currently amended) The invention of claim 18, wherein the adjustable

gas valve is adapted for receiving pressurized gas from a pressurized gas fuel

source and controls the flow of pressurized gas to the spiral shaped, adjustable

burner element.

20. (Currently amended) The invention of claim 18 wherein the spiral

shaped, adjustable burner element is easily adaptable for placement into existing

campground facilities including man made campfire rings.

21. (Currently amended) The invention of claim 18, wherein the adjustable

gas valve in combination with the plurality of orifices can affect the height and

intensity of flames emanating from said plurality of orifices formed within the

spiral shaped, adjustable burner element's surface.

22. (Currently amended) The invention of claim 19 wherein the spiral

shaped, adjustable burner element is easily adaptable for placement into existing

campground facilities including man made campfire rings.

23. (Currently amended) The invention of claim 19, wherein the adjustable

gas valve in combination with the plurality of orifices can affect the height and

intensity of flames emanating from said plurality of orifices formed within the

spiral shaped, adjustable burner element's surface.

24. (Currently amended) The invention of claim 20, wherein the adjustable

gas valve is adapted for receiving pressurized gas from a pressurized gas fuel

source and controls the flow of pressurized gas to the burner element.

25. (Currently amended) The invention of claim 20, wherein the adjustable

gas valve in combination with the plurality of orifices can affect the height and

intensity of flames emanating from said plurality of orifices formed within the

spiral shaped, adjustable burner element's surface.

26. (Currently amended) The invention of claim 21, wherein the adjustable

gas valve is adapted for receiving pressurized gas from a pressurized gas fuel

source and controls the flow of pressurized gas to the spiral shaped, adjustable

burner element.

27. (Currently amended) The invention of claim 21 wherein the spiral

shaped, adjustable burner element is easily adaptable for placement into existing

campground facilities including man made campfire rings.

28. (Currently amended) A portable artificial campfire device, comprising:

a spiral shaped, adjustable burner element including a gas entry port

rings; and

Amendment responsive to Office Action of September 3, 2004

adapted for attachment to a adjustable gas valve and a surface having a plurality of orifices of varying density formed therein and dispersed throughout the surface of the <u>spiral shaped</u>, <u>adjustable</u> burner element, wherein the <u>spiral shaped</u>, <u>adjustable</u> burner element is adapted to provide a flame of variable height and intensity through said plurality of orifices under the control of said adjustable gas valve and wherein the <u>spiral shaped</u>, <u>adjustable</u> burner element is easily adaptable for placement into existing campground facilities including campfire

an adjustable gas valve coupled to the gas entry port, wherein the adjustable gas valve is adapted for receiving fuel from a pressurized fuel source and for controlling the flow of the fuel to the <u>spiral shaped</u>, <u>adjustable</u> burner element.

29. (Currently amended) The invention of claim 1 wherein the <u>spiral</u> <u>shaped, adjustable</u> burner element is formed from tubular steel in a spiral, said entry port located at the perimeter of said spiral and said spiral terminating into a gas seal near its center.
